

SUSTAINABLE REPAIRS & REPLACEMENTS

Delivery, repairs and replacements
Vulkanisatie Zeeland

Repairs and vulcanisation of
tyres and tracks

Repair and covering of
axial and haulm rollers

Repair and covering of
track and support rollers

PlanetProof production

Not everyone in the harvesting or processing industry has acknowledged the significant advantages of having rubber or polyurethane covered machine parts repaired. Repairing parts is considerably cheaper than replacing them, which in itself is a definite plus. However, there are many more reasons for not discarding worn parts and having them repaired in a sustainable manner instead. Consider the advantages of fully customised repairs and the significant reduction of landfill. This is just one of the objectives of PlanetProof production.

Vulkanisatie Zeeland carries out all its repairs and replacements with rubber that complies with the most stringent standards of quality. This leaflet gives you an overview of what we can do.

Repairs and covering

- Repair of axial rollers, peeling rollers and haulm rollers
- Custom-made, but also according to manufacturing specifications
- Variation in the enlargement/reduction of the diameter, rubber hardness, left or right-rotating speed (swivel profile)
- Re-covering possible to 4000 mm

Track and drive wheels for undercarriages

- Repair of track and drive wheels for all kinds of undercarriages, with rubber in most cases
- PU covering possible
- Slip value of rubber is better than that of PU
- Complete wheels available from stock

Rubber tracks

- Replacement of rubber tracks after core is approved
- Long lifespan
- Levelling and repair of rubber tracks
- Supply of new rubber tracks

Forklift spoons

- 10 mm thick rubber covering on forklift spoons
- Spoons can be covered with rubber all around
- The ideal solution when working with plastic pallets or crates
- Optional: steel noses

Polyurethane (PU)

- PU covering is possible on all kinds of parts
- Shock-resistant
- High durability
- High load bearing capacity
- The slip value of rubber is better than that of PU

Steel with rubber

- We have the technology to (re)cover all kinds of steel parts with rubber
- Consider parts such as covers, grills and drive rollers used in many different ways

Food Grade repairs (food-safe)

Vulkanisatie Zeeland can equip anything with food-grade rubber. Food-grade rollers are made from a rubber compound that complies with the most stringent quality standards in the area of food safety (food grade). All food-grade produced rollers come with a declaration of compliance which endorses that the repaired axial rollers comply with the requirements for food-safe processing of vegetables and fruit.

Getting axial rollers of agrarian machines repaired has numerous advantages. Repairs are cheaper than replacements, you are reducing landfill and you can have the rollers repaired as you wish; 100 percent customised! For example, you can opt for a slightly larger or even smaller diameter, an anomalous speed (swivel profile), or a slightly harder or softer compound.

- Food-safe processing of agrarian products
- Applicable for every worn axial roller
- 100% custom-made
- Considerably cheaper than new rolls
- A sustainable business model

Quality

We repair with rubber that complies with strict quality requirements (hardness, tensile strength and tractive force, elasticity with breakages, etc.). We can send you a Technical Data Sheet of the rubber compound if you wish.

Warranty

The rollers have a warranty period of three years for demonstrable production faults such as solidity and vulcanisation. This warranty excludes wear and tear and unprofessional use.

- ✓ Second life
- ✓ Reduces waste
- ✓ Contributes to PlanetProof mark of quality
- ✓ Considerable cost savings
